

Steering Committee Meeting minutes.....April 24, 2013

Attendees: Committee – J. Ellis, S. Fuller, L. Smith, B. Doolittle, L. Parnell
Clark Patterson Lee – N. Gardner
York Zoning – C. Peter

This meeting was to review completed package presented by Clark Patterson Lee identifying all work completed by the Steering Committee and Clark Patterson Lee to review/research hydrofracking drilling operations, their impact to the community, the environment along with recommendations to the Town Board for review and consideration on adopting same, which our mission statement so states, “to protect the common interest of the Town of York as it pertains to natural gas development, specifically the practice of high volume hydraulic fracturing, by studying the topic in great lengths and identifying appropriate actions to take to maintain the continued rural character of the community, protect community values, and ensure a safe environment for all”, which parallels our goals in our Town’s Comprehensive Plan.

This endeavor was challenging due to the fact that all decision making has to satisfy both sides (pros/cons) which the Steering Committee feels that the community is represented fairly with restrictions and safeguards in place. Our thanks to all who helped make this happen.

Clark Patterson Lee will be presenting this package to the Town Board on May 9, 2013 for review and consideration.

Meeting adjourned at 7:40 pm.....J. Ellis
